### **C. Research Support.**

#### **Ongoing**

1RO1-AA13302-01 Dawson (PI) 09/30/02-08/31/07

NIH-NIAAA

Alcohol Reduction in Medical Illness: HCV as Prototype

Overall goals: to understand factors related to nondependent patients' continuation of alcohol consumption despite a medical contraindication to using alcohol and to develop an instrument to predict continued alcohol consumption.

Role: Co-Investigator

1RO1CA102828 Rose (PI) 9/19/03 – 8/31/08

NIH-AHRQ

Aging and Supportive Care in Advanced Cancer

Overall goals: to perform a randomized trial of coping and communication support for adult patients with incurable last stage cancer.

Role: Co-Investigator

1RO1 HS01512301 Cebul (PI) 10/1/04-09/30/07

PHS-NHHS-AHRQ

Trial of Decision Support to Improve Diabetes Outcomes

The investigation is a 2-year cluster-randomized trial of 22 primary care practices, 197 PCPs, and their 13,000 adult diabetics across two health systems experienced in using the same commercial EMR system. Aims are to: 1) compare the incremental effects of our interventions on primary outcomes (quality of care/patient safety, and utilization); 2) estimate intervention effects in pre-specified sub-groups; 3) describe specific features of patients and PCPs that are associated with different types and levels of adoption of our interventions; and 4) describe general and intervention-specific unintended consequences of our interventions.

Role: DBASE Manager
