Research Interests:

Primary focus: The study of traditionally hard-to-treat populations with bipolar disorder, with a goal of helping to close the gap that exists between the relatively high levels of treatment efficacy seen in controlled clinical trials for individuals with bipolar disorder, and the relatively low levels of treatment effectiveness seen in underserved or disadvantaged populations. This includes populations such as individuals receiving care in the community, individuals who are non-adherent or partially adherent with medications, and older adults with bipolar illness.
